

**REMEMBER, IT ALL  
DRAINS TO OUR  
LAKES AND RIVERS...**

The message is simple: Our storm water systems and sanitary sewer systems are separate. Most storm drains and roadside ditches lead straight to our rivers and lakes. Whatever goes into storm drains (including litter, oil, and yard waste) flows directly into our environment, untreated.

So what should you do?

- **Don't dump** anything into storm drains. This is a violation!
- **Volunteer** to help mark storm drains in our city (marker example shown here).
- **Report Polluters** - Use the contact info on the back.
