

## WHEN YOUR CAR'S LEAKING OIL ON THE STREET,

**REMEMBER, IT'S NOT JUST LEAKING OIL ON THE STREET...**

Leaking oil goes from your car to the street, from the street to the storm drain, and from the storm drain into our streams, rivers, and lakes. Think of the number of cars in our area and you can see how significant a threat auto fluids can be to our environment.

So what should you do?

- **Fix that oil leak** in your car.
- **Use cat litter** to soak up leaked fluids.
- **Recycle used oil** and other auto fluids. Take them to HHW or your local auto shop.

*Separate Storm Sewer Systems – What goes into storm drains flows directly into the environment, untreated.*
